

## CZ8t code zero unit

The Reckmann CZ 8t is a below deck mounted hydraulic turning padeye. Its compact design and light weight makes it ideal for all code-0 and light wind furling purposes. Because of the high furling speed, even large sails can be furled very fast. The custom deck spacer ring allows a deck thickness up to 62 mm. The furler is protected against corrosion and can be mounted in the anchor locker e.g. Reckmann offers a range of stay connectors.

**NEW DESIGN!**

quick release pin
