proSCREEN

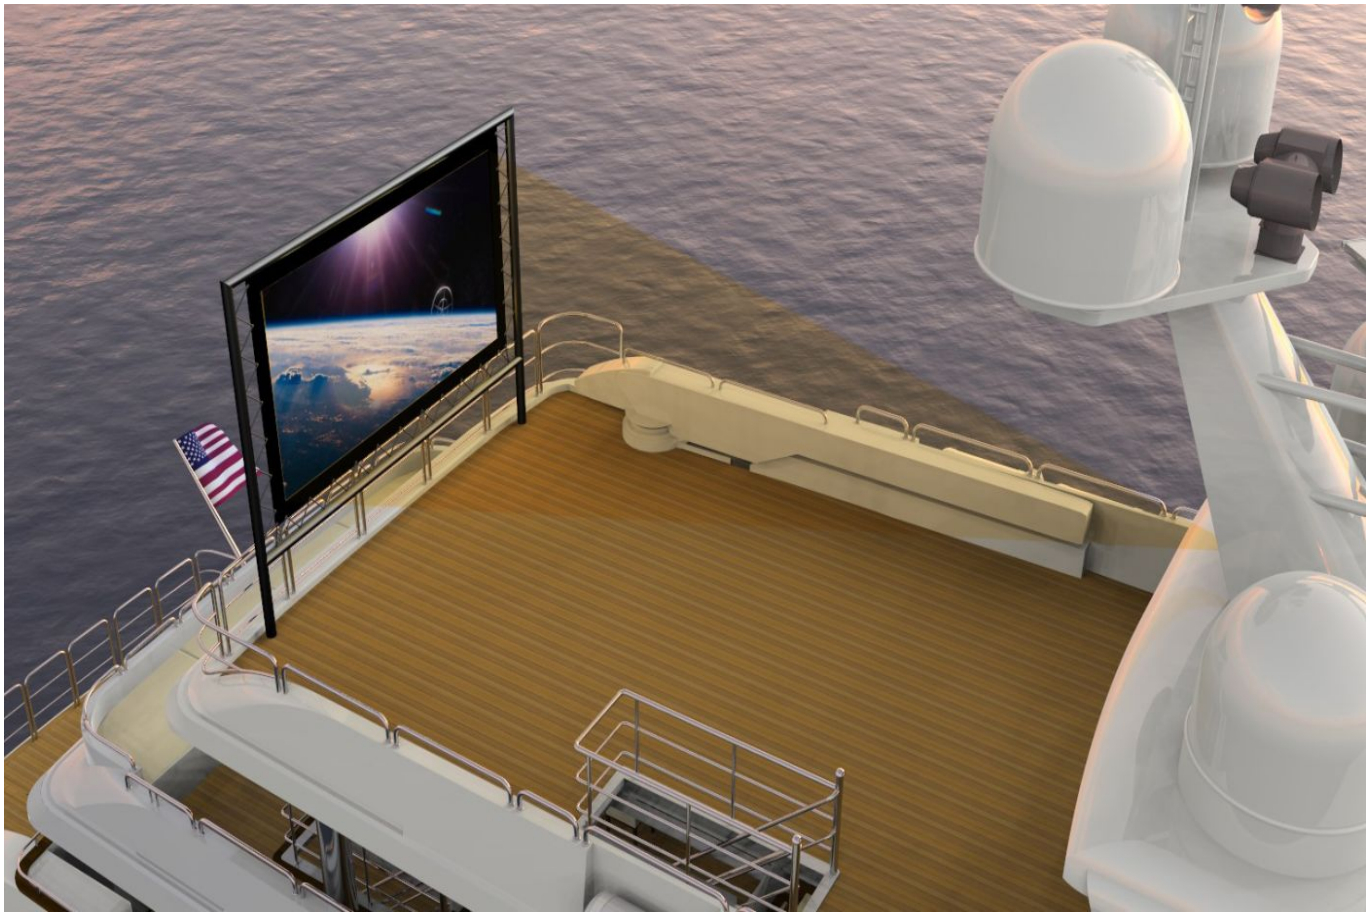

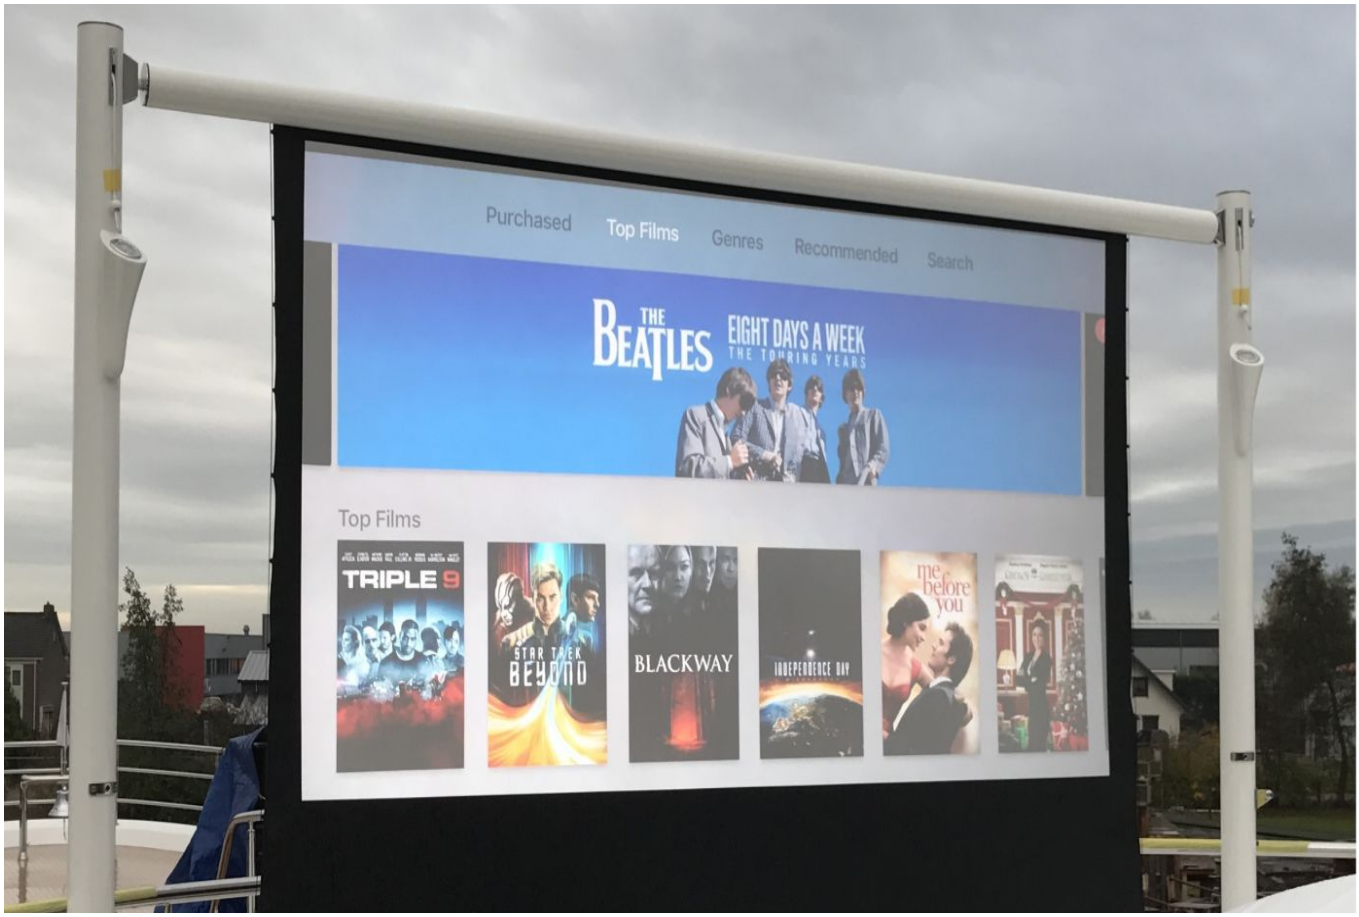

Ultralight removable Projection Screens for the outer Deck

proSCREEN projection screens are cinema screens that can be easily assembled and dismantled for a video experience on the outer deck. proSCREEN can be ordered in any size. The largest screen we have made so far was around 7m wide and 4m high.

A compact alternative is the roll-up version of the proSCREEN. Here the screen is rolled into a horizontal carbon profile, which can be easily mounted between two SunFLIP poles. For deployment, the screen is just unrolled and attached to the poles at both lower corners.
Assembly is fast and easy, and one carbon profile is the only part which needs to be stowed away.

- The screen systems fit in our sunFLIP’s awnings’ deck bracket and can be combined with them too.
- The system can be assembled and dismantled in a few minutes and this can be done by two to three people.
- All fittings and mountings are designed to be quick release systems that are extremely easy to handle.
- The individual system components are as simple as they possibly can be, ensuring user-friendliness.
- Despite the large screen area, the individual parts of the dismantled systems are small enough to be stowed on-board without any problems.
