Superyacht umbrellas with offset support

The paraSOL sidepole is designed for spacious deck areas where a central support would interfere with the layout, furniture or movement on board. With its offset support structure, the shade area remains open and freely usable, making it ideal for lounge areas, sunbeds and seating arrangements on superyachts.

The construction combines highly polished stainless steel components with lightweight carbon elements for easy handling and a refined appearance. Covers are available in PVC or acrylic fabrics from our current collections, allowing the paraSOL sidepole to be coordinated with Reckmann sun awnings and other textile solutions on board.

Our product benefits:

- Open usable shade area without central pole
- Ideal for lounge areas, sunbeds and seating groups
- Lightweight carbon construction for easy handling
- Can be painted according to customer requirements
- Wind resistant due to integrated wind stabilizer
- Quick lock fitting for easy connection of the shade
- Removable battery light for illumination
- Various on-deck storage option

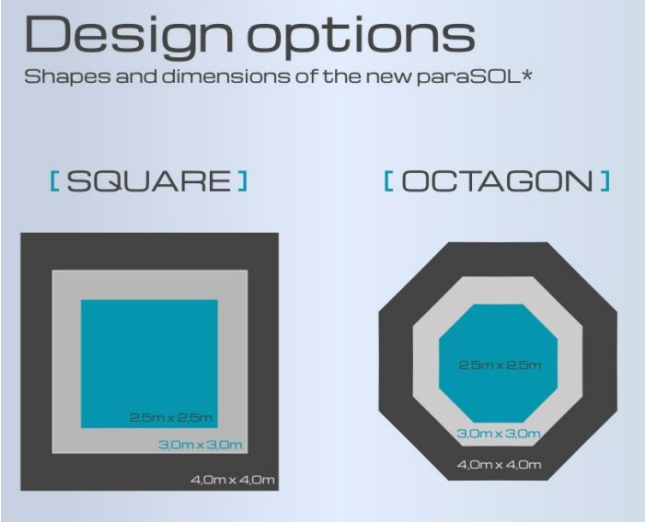

Features

Securely packed in a few simple steps

For storage, the paraSOL can be protected with different cover options. The soft cover provides quick everyday protection, while the full cover protects the complete parasol system when stored on deck for a longer period.

middle: with "soft cover"
right: with "full cover"

Size and shape variants

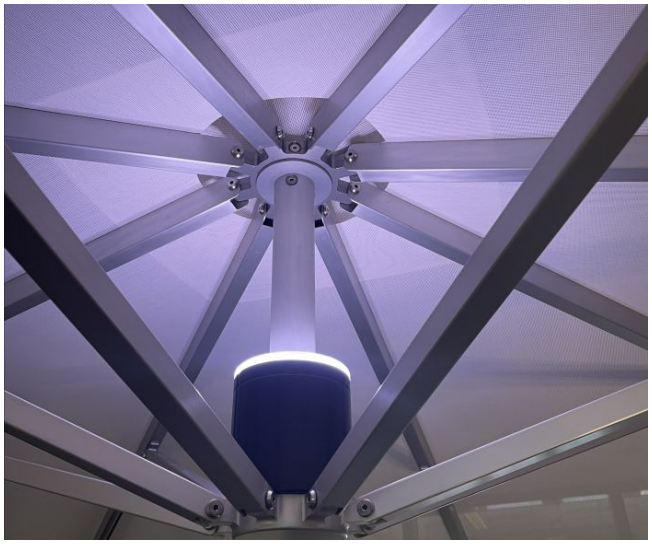

paraSOL is available in different sizes and shapes to suit the layout of the deck. Custom dimensions and special shapes can also be realised for individual yacht projects.

Features

Range of colours and fabrics

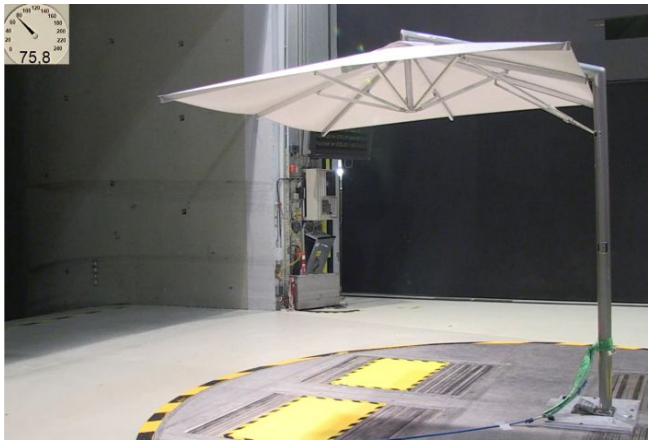

The canopy cover can be selected from our current fabric collections. Carbon and aluminium parts will be painted or anodised to match the yacht's colour scheme. Stainless steel fittings are mirror polished or given a matt sandblasted finish.

Optional RGB battery light

Mounted below the canopy, the light shines upwards into the parasol and creates a soft, pleasant atmosphere after sunset. The RGB colour setting allows the illumination to be adjusted to the mood on board. It is easy to mount and remove.

Features

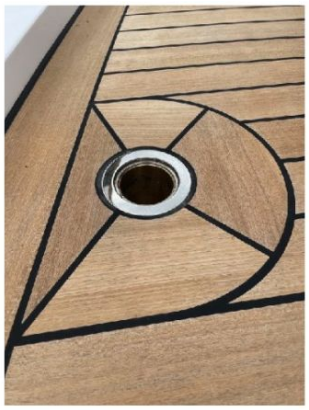

Wind tunnel tested

The paraSOL range has been developed for high wind stability and tested in the wind tunnel. An integrated wind stabilizer helps to keep the parasol stable and controlled in demanding deck conditions.

The 2 x 2 metre model can withstand wind speeds of up to 30 knots from any direction.

Socket with lid

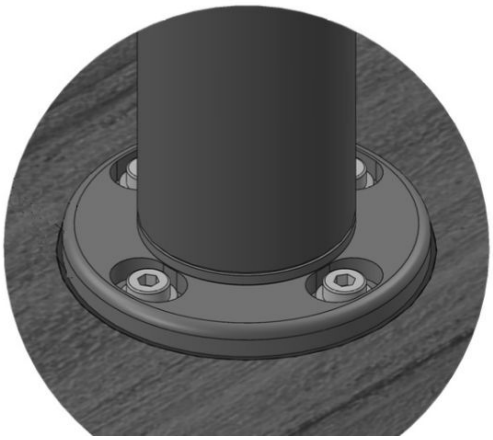

Socket without lid

mounting option 1: TwistFIT

TwistFIT is our removable deck socket solution for paraSOL systems.

The bronze deck insert is permanently installed in the structural deck socket and receives the removable deck fitting, leaving a clean flush stainless steel lid when the parasol is not in use.

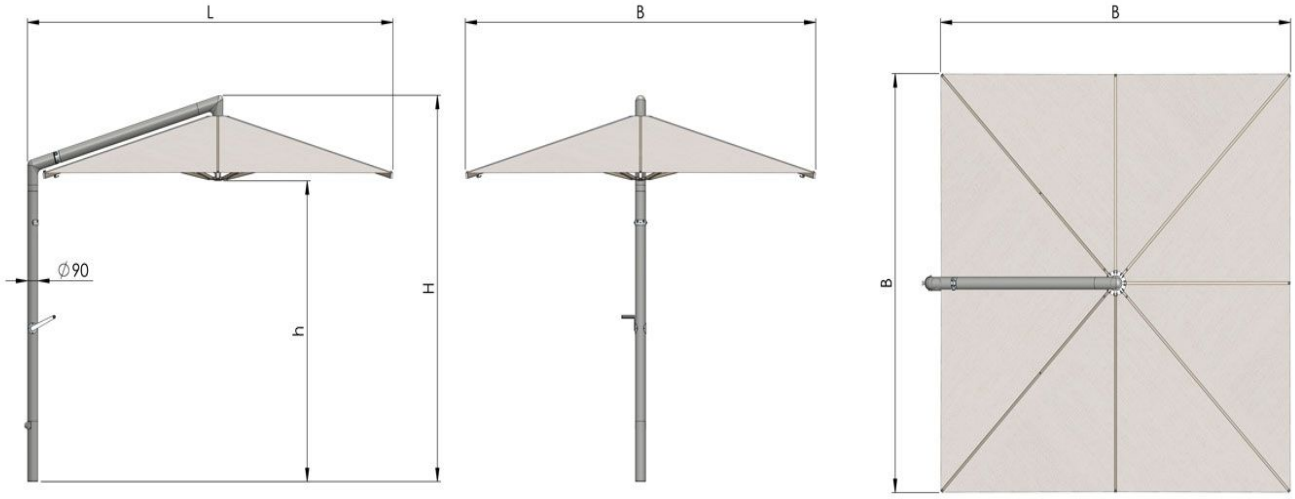

mounting option 2: fixed deck plate

The fixed deck plate is a simple and robust mounting solution for defined parasol positions. It is permanently installed on deck and provides a solid base pin for quick installation of the paraSOL.
