HMJ 20

type of Application	external
cylinders	2x HLJ 10 S10
pump	HHP410
capacity	20 t

Consisting of two cylinders each for external mast jack applications

For our series of hydraulic cylinders for external mast jack applications, we fall back on our tried and tested industrial technology. We offer cylinders with lifting forces from 10 up to 100 tons either on their own or in a practical carry case with a pump, pressure gauge and hose. The compact aluminium cylinders work at pressures of up to 700 bar and our special high-pressure hose connector allows for clean and safe functioning. The easy-to-read pressure gauges allow for precise dock tuning.

Mast jack sets are consisting of two cylinders. Read more about the external mast jack cylinders.
