MF-3/R40

power supply	manual
attachment of the sail	with profile
max. headstay length	28 m
forestay (rod size)	-30, -40, -48
ø forestay (wire)	14 mm, 16 mm
stroke stay adjuster	80 mm
aluminium profiles	R40
boat size	54 - 65 ft.
profile material	aluminum

Manual furling system for above-deck installation

The manual furling systems of the MF series are the continuation of a long tradition of reliable and well-engineered furling systems. Building on more than 30 years of experience with our manual furling systems, this product shows the continuation of both our technical and optical principles:

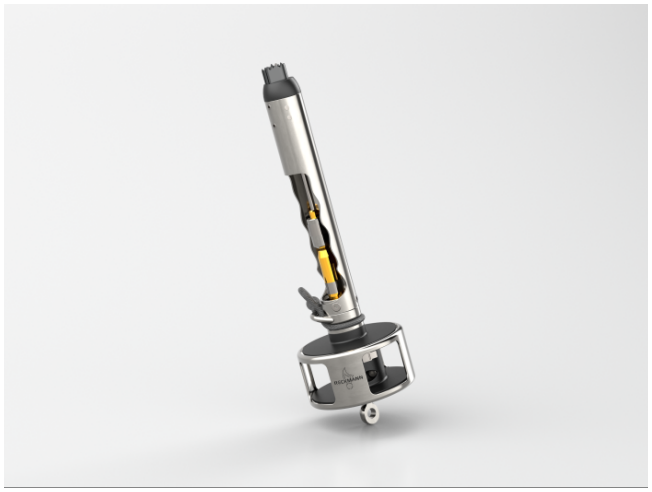

- uncompromising reliability
- timeless design
- long durability
- low-maintenance operation
- high availability of replacement parts

In addition to the classic on-deck installation, *below-deck* variants have been developed within the MF series:

- MF-UD for connection to a chainplate below deck through a deck cut-out
- MF-DF for connection to a chainplate below deck, featuring a deck flange that cleanly covers and seals the deck cut-out

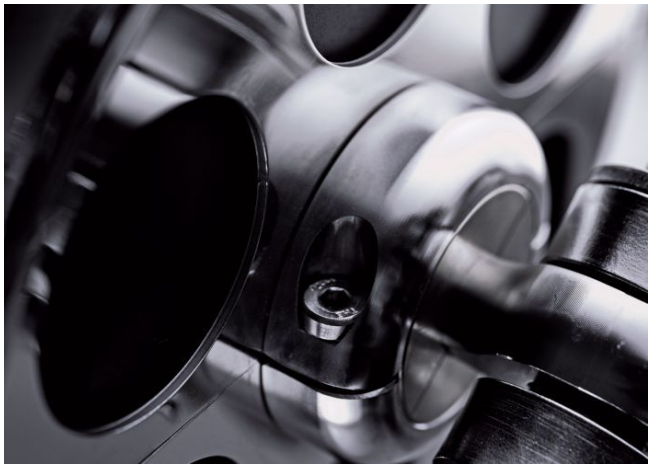

This allows the proven MF technology to be integrated elegantly and functionally into modern deck and rigging concepts.

Features

Integrated Turnbuckle

The integrated turnbuckle is designed for precise rig tuning in port. It is housed inside the torque tube and can be easily accessed and adjusted from the outside using simple tools. This allows accurate adjustment of forestay length, rig trim and mast rake while the yacht is docked.

Stainless Steel Drum Guard

The elegant stainless steel drum protection cage prevents the reef line from slipping. It also protects the furling system from damage.

Halyard Swivel FS

The Reckmann high-performance halyard swivels turn with extremely low amounts of friction, thereby guaranteeing a secure operation without twisting the halyard. The compact design and size graduation ensure a low weight aloft.
