swivel with eye for mast connection via toggle and additional sail head attachement

The highly-compact swivel for foresail furling systems with torsionally rigid forestays are distinguished by their extremely low weight. For workloads of 12 tons or more, we make the swivels out of titanium. The smooth-running bearings ensure that the swivels can turn with minimal lag, meaning that the stay is protected from strong torsional stresses.

These swivels with the extension “L” are equipped with a **attachment points for the sail head**.
