FS-4/R40

application	for smaller profiles
weight	3 kg
max. work load	2 t
compatible furling profiles	R40
L	205 mm
profile material	aluminum

The compact halyard swivel for all smaller profiles.

Our tried and tested halyard swivels for foresail furling systems with profiles are distinguished by their low friction, even when bearing heavy loads. This prevents the profile from becoming entangled when bearing heavy loads.

All halyard swivels are therefore built to be lightweight in order to save on weight aloft. Where the weight aloft plays a specific role, we also offer halyard swivels made from aluminium and titanium.

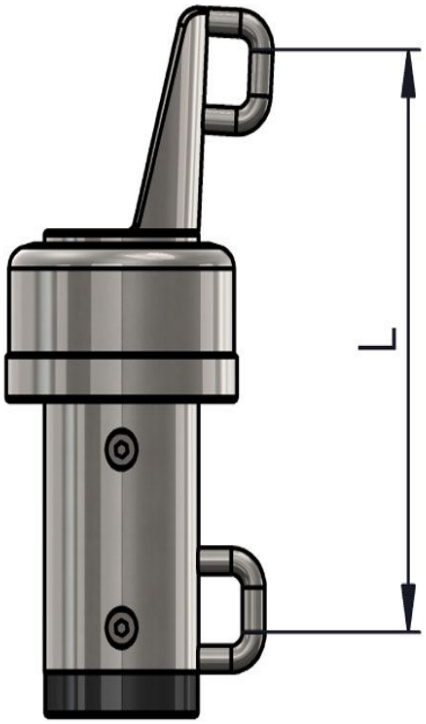

FS-1 up to FS-4 are compact halyard swivel for all smaller profiles. These universal halyard swivels feature stainless steel mounting and changeable sliding inserts.

FS-1 to FS-4 – compact halyard swivel for all smaller profiles
